

LUNAR LETTER

Four Pillars + Five Elements Sample

Bazi Report / Sample Report

Fictional case

Client: Noah Lin
Question: What does my elemental structure suggest about work rhythm, relationships, and decision pressure?

This sample shows how a finished digital report reads when it is written for one person, one question, and one interpretive frame. It is not a list of features.

Important note

How to read this sample

This is a fictional demonstration report. A paid Lunar Letter report is prepared from the customer's own information, question, and submitted details.

The report uses symbolic and reflective frameworks. It does not provide medical, legal, financial, tax, emergency, psychological, or investment advice.

The purpose of the sample is to show tone and depth. It avoids copying third-party report language and does not promise guaranteed outcomes.

Digital reports are delivered by email as PDF files, usually within 24-72 hours after verified PayPal payment and completed submission.

If the customer's information is incomplete, delivery may wait for clarification. Customers should review Terms, Privacy, Refund, Disclaimer, Contact, and Cookie pages before purchase.

This page is written as if the report has already been prepared for the fictional client, so the interpretation is concrete rather than a placeholder.

Client snapshot

Starting Map

Day master	Fictional Yang Wood profile used for demonstration.
Element pattern	Wood and Fire are active; Metal pressure and Earth responsibilities require pacing.
Report lens	Rhythm, resource use, relational boundaries, and practical timing.

The snapshot is not the whole reading. It gives the report a container so the interpretation can stay specific instead of becoming generic personality copy.

Section 01

Elemental Orientation

Elemental Orientation

Noah's fictional chart is read as Yang Wood growing toward visibility. Wood wants direction, expansion, and a sense that effort is connected to living purpose. Fire makes expression and recognition important, while Metal pressure asks for standards, deadlines, and refinement.

The central pattern is growth under evaluation. Noah may feel most alive when building something, but the moment other people begin measuring it, his body may tighten. This creates a work rhythm of enthusiasm, overextension, and then resistance.

A useful Bazi report does not label an element as good or bad. It asks whether the element is supported, excessive, blocked, or misused in the current season of life.

In Noah Lin's case, this section is not read as a detached symbol. It is read through the submitted question: What does my elemental structure suggest about work rhythm, relationships, and decision pressure? That question keeps the interpretation specific, so the report does not drift into a generic personality description.

The first practical task of this section is to separate pattern from assumption. A pattern repeats across behavior, feeling, timing, or visible choices. An assumption appears quickly and may be emotionally persuasive, but it still needs evidence before it becomes a conclusion.

The second task is to notice contradiction without flattening it. If one part of the map asks for movement and another asks for safety, the report does not shame either side. It looks for a step small enough to respect both needs while still creating movement.

The language here is intentionally reflective rather than predictive. It can describe a pressure point, a symbolic theme, and a useful experiment, but it does not guarantee what another person, employer, market, institution, or future event will do.

After reading this section, Noah Lin is invited to mark three lines: one that feels immediately true, one that feels uncomfortable but possible, and one that should be tested in ordinary life before being treated as settled.

For a paid report, this is where the writing would become even more personal. The reader's exact background, preferred tone, constraints, and stated question would decide which details are expanded, softened, or treated as the central working thread.

Section 02

Work Rhythm

Work Rhythm

Wood needs a path. Noah works better when a project has a living sequence rather than a vague ambition. He may struggle in environments where tasks are disconnected from a larger direction.

Fire gives him visibility and expressive force. When Fire is healthy, Noah communicates clearly and can rally people around an idea. When it is excessive, he may promise too much because the moment of inspiration feels more available than the later maintenance.

Metal asks for editing. In work terms, this means deadlines, standards, and the humility to cut what does not serve the structure. Metal can feel harsh to Wood, but it also helps Wood become useful timber rather than uncontrolled growth.

In Noah Lin's case, this section is not read as a detached symbol. It is read through the submitted question: What does my elemental structure suggest about work rhythm, relationships, and decision pressure? That question keeps the interpretation specific, so the report does not drift into a generic personality description.

The first practical task of this section is to separate pattern from assumption. A pattern repeats across behavior, feeling, timing, or visible choices. An assumption appears quickly and may be emotionally persuasive, but it still needs evidence before it becomes a conclusion.

The second task is to notice contradiction without flattening it. If one part of the map asks for movement and another asks for safety, the report does not shame either side. It looks for a step small enough to respect both needs while still creating movement.

The language here is intentionally reflective rather than predictive. It can describe a pressure point, a symbolic theme, and a useful experiment, but it does not guarantee what another person, employer, market, institution, or future event will do.

After reading this section, Noah Lin is invited to mark three lines: one that feels immediately true, one that feels uncomfortable but possible, and one that should be tested in ordinary life before being treated as settled.

For a paid report, this is where the writing would become even more personal. The reader's exact background, preferred tone, constraints, and stated question would decide which details are expanded, softened, or treated as the central working thread.

Section 03

Relationships and Boundaries

Relationships and Boundaries

The Wood pattern can make Noah generous with time, ideas, and encouragement. He may assume that growth should be shared freely. This is beautiful, but it can blur boundaries if others rely on his momentum without contributing structure.

Earth responsibilities show where practical life asks to be considered: money, family obligations, health routines, and promises already made. If Noah ignores Earth, the chart becomes exciting but unstable.

The relationship guidance is not to become less generous. It is to attach generosity to clear agreements. Wood can support others without becoming the soil for everyone else's plans.

In Noah Lin's case, this section is not read as a detached symbol. It is read through the submitted question: What does my elemental structure suggest about work rhythm, relationships, and decision pressure? That question keeps the interpretation specific, so the report does not drift into a generic personality description.

The first practical task of this section is to separate pattern from assumption. A pattern repeats across behavior, feeling, timing, or visible choices. An assumption appears quickly and may be emotionally persuasive, but it still needs evidence before it becomes a conclusion.

The second task is to notice contradiction without flattening it. If one part of the map asks for movement and another asks for safety, the report does not shame either side. It looks for a step small enough to respect both needs while still creating movement.

The language here is intentionally reflective rather than predictive. It can describe a pressure point, a symbolic theme, and a useful experiment, but it does not guarantee what another person, employer, market, institution, or future event will do.

After reading this section, Noah Lin is invited to mark three lines: one that feels immediately true, one that feels uncomfortable but possible, and one that should be tested in ordinary life before being treated as settled.

For a paid report, this is where the writing would become even more personal. The reader's exact background, preferred tone, constraints, and stated question would decide which details are expanded, softened, or treated as the central working thread.

Section 04

Decision Pressure

Decision Pressure

When Noah feels pressure, he may try to solve it by growing faster. More ideas, more commitments, more conversations. The report suggests the opposite: identify the Metal standard, name the Earth constraint, and then choose the Wood path that can actually be sustained.

The most useful decision question is not What should I do with my whole life? It is Which branch has enough root, enough light, and enough pruning to grow next?

This keeps the reading practical while preserving the symbolic language of the five elements.

In Noah Lin's case, this section is not read as a detached symbol. It is read through the submitted question: What does my elemental structure suggest about work rhythm, relationships, and decision pressure? That question keeps the interpretation specific, so the report does not drift into a generic personality description.

The first practical task of this section is to separate pattern from assumption. A pattern repeats across behavior, feeling, timing, or visible choices. An assumption appears quickly and may be emotionally persuasive, but it still needs evidence before it becomes a conclusion.

The second task is to notice contradiction without flattening it. If one part of the map asks for movement and another asks for safety, the report does not shame either side. It looks for a step small enough to respect both needs while still creating movement.

The language here is intentionally reflective rather than predictive. It can describe a pressure point, a symbolic theme, and a useful experiment, but it does not guarantee what another person, employer, market, institution, or future event will do.

After reading this section, Noah Lin is invited to mark three lines: one that feels immediately true, one that feels uncomfortable but possible, and one that should be tested in ordinary life before being treated as settled.

For a paid report, this is where the writing would become even more personal. The reader's exact background, preferred tone, constraints, and stated question would decide which details are expanded, softened, or treated as the central working thread.

Integration

Practical Reflection

Suggested next steps

List the projects that currently feel alive and the projects that only feel obligated.

Choose one Metal standard that would improve quality without becoming self-punishment.

Define one Earth boundary around time, money, or rest.

Do not use inspiration as a reason to overpromise.

Review decisions by sustainability, not only by excitement.

A strong report leaves the customer with language they can use immediately and questions that keep the interpretation grounded.

The goal is not to make the customer dependent on repeated purchases. The goal is to make the current question clearer and more workable.
